

Project Design Phase-II Data Flow Diagram & User Stories

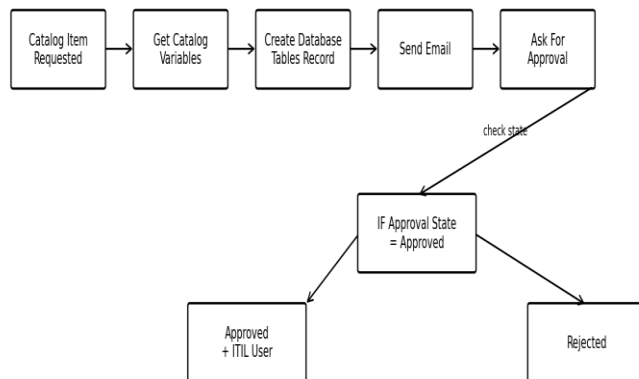

Date	16 September 2026
Team ID	Individual Project
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	4 Marks

Data Flow Diagrams:

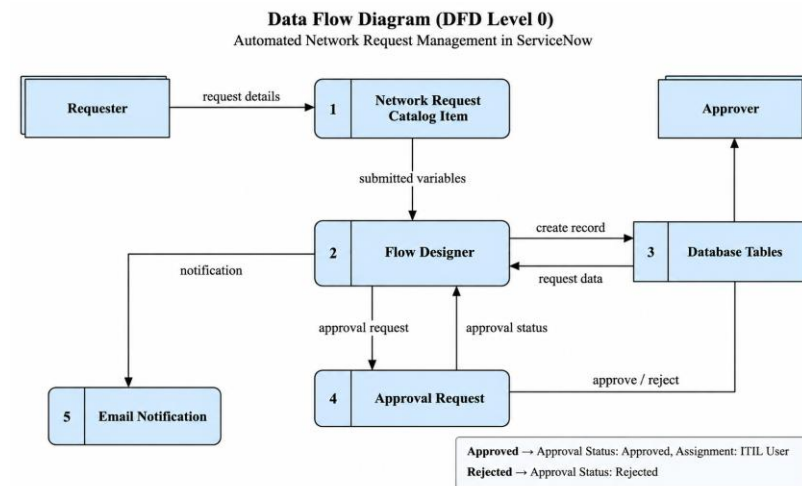

A Data Flow Diagram (DFD) is a visual representation of how information moves through a system. For the Automated Network Request Management in ServiceNow project, the DFD shows how a requester submits a Network Request, how ServiceNow processes the catalog variables through Flow Designer, where the request data is stored, and how approval decisions update the request.

Example: [\(Simplified\)](#)

Network Request Flow Designer - Simplified Flow

Example: DFD Level 0 (Industry Standard)

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Requester	Network Request	USN-1	As a requester, I can submit a Network Request through the Service Catalog.	The Network Request form opens and the request is submitted successfully.	High	Sprint-1
Requester	Requester Information	USN-2	As a requester, I can select a user and automatically populate requester information.	User Name, Email and Phone Number are populated from the selected user.	High	Sprint-1
Requester	Request Details	USN-3	As a requester, I can enter mobile number, connection type, total amount, payment mode and customer address.	The required request information is captured successfully.	High	Sprint-1
Requester	Dynamic Form	USN-4	As a requester, I can see the Existing ID field when I select Existing as the Type of Connection.	Existing ID is displayed for Existing and hidden for New.	Medium	Sprint-2
System	Flow Automation	USN-5	As a system, I can retrieve the submitted catalog variables automatically.	Get Catalog Variables retrieves the values from the submitted Network Request.	High	Sprint-2
System	Data Management	USN-6	As a system, I can create a Database Tables record automatically for each submitted request.	A new Database Tables record is created with the submitted request values.	High	Sprint-2
System	Notification	USN-7	As a system, I can send an email when a Network Request is created.	A request-created email is generated for the configured recipient.	High	Sprint-2
Approver	Approval Management	USN-8	As an approver, I can approve or reject a Network Request.	An Approval Request is created and can be set to Approved or Rejected.	High	Sprint-3
System	Approved Processing	USN-9	As a system, I can automatically process an approved Network Request.	Approval Status becomes Approved and Assignment to becomes ITIL User.	High	Sprint-3
System	Rejected Processing	USN-10	As a system, I can automatically process a rejected Network Request.	Approval Status becomes Rejected through the ELSE branch.	High	Sprint-3
Administrator	Request Tracking	USN-11	As an administrator, I can view the request details and approval information.	The Database Tables record and Approval Request related list are available.	Medium	Sprint-3
Administrator	Security	USN-12	As an administrator, I can control access to Database Tables using ACLs.	Create, Read, Write and Delete access is controlled by ACLs.	Medium	Sprint-4
