

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	16 September 2026
Team ID	Individual Project
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Network Request Submission	Submit a Network Request through the Service Portal / Service Catalog
		Capture Requested For and requester information
		Capture Mobile Number, Type of Connection, Total Amount, Mode of Payment and Customer Address
FR-2	Requester Information	Use the Requester Information variable set
		Auto-populate User Name, Email and Phone Number from the selected user
FR-3	Dynamic Request Form	Display Existing ID when Type of Connection is Existing
		Hide Existing ID when Type of Connection is New
FR-4	Automated Request Processing	Trigger the Network Request Flow in Flow Designer when the catalog request is submitted
		Get Catalog Variables from the submitted request
		Create a record automatically in the Database Tables custom table
FR-5	Approval Management	Create an Approval Request for the Database Tables record
		Allow the configured approver to approve or reject the request
FR-6	Approval-Based Updates	If approved, update Approval Status to Approved and assign the record to ITIL User
		If rejected, update Approval Status to Rejected
FR-7	Email Notifications	Send an email notification when the request is created
		Send approval-related notification after the approval decision
FR-8	Request Tracking & Security	View request records and approval information in ServiceNow
		Use Create, Read, Write and Delete ACLs for the custom Database Tables table

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The Network Request catalog form should be simple and easy for users to complete.
NFR-2	Security	Access to request records should be controlled using ServiceNow roles and ACLs.
NFR-3	Reliability	The automated flow should consistently create records and process approval outcomes.
NFR-4	Performance	Catalog submission and automated processing should complete without unnecessary manual steps.
NFR-5	Availability	The Network Request functionality should be available through the ServiceNow Service Portal / Service Catalog.
NFR-6	Scalability	The Flow Designer-based process should support additional network request records and future workflow extensions.
